

EVERY YOUNG PERSON WANTS TO BE PART OF SOMETHING GREAT

2019/20

CARMEL VI FORM PROSPECTUS

WELCOME

Welcome to Carmel College, where students leave with more than just outstanding results. We are an 11-18 Catholic Academy with an outstanding record of academic achievement at both GCSE and A Level, which places the College as one of the top performing schools in the country.

Carmel College VI form provides outstanding academic and vocational courses for students from all over Darlington and surrounding areas. The VI form is renowned for high quality teaching, small classes, personal support and fantastic opportunities.

We are proud to provide an environment of joyous corridors and purposeful classrooms, with the expectation that students have a rewarding and fulfilling experience during their time with us.

Mike Shorten
Principal, Carmel College
Deputy CEO, Carmel Education Trust

So you are starting to think about your next step after secondary school. Choosing where to go can sometimes be confusing but don't let it daunt you. By choosing Carmel VI Form, you will be making a decision that will help ensure your safe passage to the wider world of higher education or successful employment. At Carmel VI Form we work hard to promote a balance between the structure you have been used to in secondary school and greater independence. There are many differences between life in VI Form and life in secondary school. A Level work is challenging and time-consuming but here at Carmel we will support you and provide outstanding academic and pastoral care throughout your time as a VI Form student and also equip you with the practical and emotional tools you need to help you cope with the increased pressure of being a VI Form student. VI Form is an exciting time in your life and by choosing the subjects you love, studying is made much more enjoyable.

Here at Carmel VI Form we focus on a core of just over 300 students, this we believe is the right size to offer dedicated facilities, outstanding teaching and the capacity to help and support our students to make the right choices to succeed at university, in life and employment. Our College has a history of successful students. Every year we achieve excellent results and our students go on to study at many of the UK's leading universities.

Carmel VI Form is full of new opportunities. We are a community built on 'Academic Strength and Spiritual Depth'; a community of individuals from a wide variety of backgrounds who come together to work, play, reflect, compete, discover, analyse and ultimately succeed.

It is my firm belief that every young person wants to be part of something great. Therefore, whether you are already a Carmel student, or coming to us from another school, I am confident you will find Carmel VI Form to be a great place to grow and learn.

Louise Parnaby
Head of VI Form

MEET THE TEAM

We believe in team work here at Carmel VI Form and therefore have a wide management team to ensure that the needs of every student is met.

MRS L PARNABY
HEAD OF VI FORM
LPARNABY@CARMEL.ORG.UK

Mrs Parnaby is the Head of VI Form and teaches Mathematics. Her role is to lead, inspire and motivate all students in the VI Form. She looks after their welfare, ensures that they have a consistently outstanding holistic experience in our VI Form and ultimately achieve their potential. She is responsible for the strategic direction of the VI Form and works closely with all Curriculum Leaders to ensure that the Key Stage 5 curriculum offers a high degree of quality and challenge. In addition, she is responsible for the admissions process to VI Form.

MRS E LEWIS
ASSISTANT HEAD OF VI FORM - YEAR 13
ELEWIS@CARMEL.ORG.UK

Mrs Lewis is an assistant head of VI Form and also teaches PE. Her role is to support the Head of VI Form to ensure a consistent approach to all that the college has to offer. She also focuses on pastoral support and is available to help, advise and guide students to achieve their full potential within VI form.

MRS K SHIELD
ASSISTANT HEAD OF VI FORM - YEAR 12
KSHIELD@CARMEL.ORG.UK

Mrs Shield is an assistant head of VI Form and also teaches Chemistry. Her role is to support the Head of VI Form to ensure a consistent approach to all that the college has to offer. She also focuses on pastoral support and is available to help, advise and guide students to achieve their full potential within VI form.

MS L DODDS
VI FORM ADMINISTRATOR
LDODDS@CARMEL.ORG.UK

Ms Dodds is the VI Form Administrator and is based in the Main School Office. She is the first point of contact for both students and parents and can be reached via her direct line on 01325 523421. She works in support of the VI Form Management Team, dealing with student and parent queries and helps in the processing of VI Form administration.

MRS S LOWE
SIXTH FORM PROGRESSION LEADER
SLOWE@CARMEL.ORG.UK

Mrs Lowe is the Sixth Form Progression Leader and teaches Mathematics. She provides support to all students to aid with future career decisions including UCAS application process, admissions tests and alternative routes.

TOP TEN REASONS TO JOIN US

- 1** We are the only college in the area rated as 'Outstanding' by Ofsted.
- 2** We are a community where everyone is welcome; Carmel is open to students of any faith or none and everyone is supported in their particular journey. Students from various different schools in Darlington and the surrounding areas come together to make our VI Form amazing.
- 3** We offer bespoke packages to our students. We look at each individual's strengths and weaknesses and the skills you possess and we tailor a package to suit you. After receiving important information and guidance, students can select 3, 4 or 5 A Levels with the opportunity also to complete either the EPQ, Mathematical Studies and/or Sports Leaders Awards.
- 4** Excellent exam results each year, of which we are very proud. Our students progress to the finest universities in the country – and sometimes beyond these shores. Some move directly into apprenticeships or employment and all are provided with individual advice and careful support. Our A*-B grades for the past 3 years are 56%, which is significantly higher than the national average.
- 5** We have a strong team of VI Form tutors who track the progress of each student, assisting them every step of the way in their academic and personal development and providing outstanding pastoral care.
- 6** We value our VI Form students very highly and they are afforded many privileges. As well as having access to the whole College, they have their own common room, complete with a pool table, Playstation, hot and cold drinks machine and an all-day bistro.
- 7** Our subject teachers are all highly qualified and experienced A Level teachers. Carmel VI Form is for students who want to achieve at the highest level. The curriculum is wide-ranging and includes traditional A Levels alongside vocational courses.
- 8** There are many opportunities to get involved in a number of activities and events beyond the classroom, all part of our extensive enrichment programme. The College has an unrivalled history of sporting success, a great tradition of amazing musical productions and a well-established Duke of Edinburgh scheme. There are also fantastic opportunities to travel to places such as Paris, Lourdes and the USA.
- 9** We currently offer a successful Bursary scheme. The Bursaries are intended to provide financial help to young people aged 16 to 19, who face financial barriers to participating in education or training, provided they meet agreed standards of attendance and behaviour.
- 10** Carmel VI Form has a dynamic and focused Student Leadership Team. There are many opportunities to develop leadership skills at Carmel. In addition to the roles for which students are elected, there is the opportunity for all to be involved in the running of the school and assisting staff with day-to-day duties.

"Throughout my time in Carmel Sixth Form, I was given a lot of support and guidance - from arranging all my work experience, to closely assisting me during application processes; the advice that I received was invaluable. I was given many opportunities that led me to feel that the choices I was making for my future were well informed."

CHARLOTTE WOJCIK

Previous School: Carmel

Subjects: Maths, Further Maths and Physics

Destination: Civil Engineering Apprenticeship with Atkins (Newcastle)

"What I loved about Carmel was how much of a close-knit community it was. I was able to make lifelong friends and build relationships with teachers who would guide me to where I wanted to be! Even now at university I often reference some of the things they taught me and want to share with them when I do well. Although the academic side of Carmel is undoubtedly essential, I also loved the social activities such as the 'Santa Dash' - it was always my highlight of the year!"

BETH HALL

Previous School: St Michael's

Subjects: Biology, Chemistry, History and Spanish

Destination: The Royal Veterinary College, University of London

"I absolutely loved my time at Carmel. I've made friends for life, tried things I never believed I would be able to do, and travelled to places all across the globe. I never would have been able to have had these experiences anywhere else. My favourite memories about my time at college would either be the DofE awards or the Lourdes pilgrimages. I loved all the events inside college too - The Santa Dash and our inter form balloon races will remain long in my memory!"

CHLOE SUMMERS

Previous School: St Aidan's

Subjects: History, English Literature, Biology

Destination: Reading History at The University of Oxford

"One of the best features of Carmel is that there is a real family atmosphere. Having a good relationship with your teachers definitely helps with your studies. You may not see it at first, but even after the first couple of weeks, you will have probably made friends for life."

MATHEW PEARSON

Previous School: Carmel

Subjects: English Literature, Media Studies and Philosophy & Ethics.

Destination: Reading Humanities and English Literature at Northumbria University

"I really enjoyed Carmel as a student. You can feel the warmth of the community which means that you quickly become immersed in the life of the school. I liked that I had many options available to me which enriched my experience as a student. Most of all, I loved how supportive the teachers were, not just in my studies but in my development as a person."

SAM HARVEY

Previous School: Carmel

Subjects: Business Studies, English Language and Religious Studies

Destination: TESOL Programme teaching English in Japan, before moving onto The University of Strathclyde

"The teaching staff at Carmel provided plenty of support when I was both preparing for exams and applying for universities. They helped me achieve fantastic grades and secure a place at Oxford."

MATTHEW HOPKINS

Previous School: Carmel

Subjects: Maths, Further Maths, Physics and Chemistry

Destination: Studying Physics at the University of Oxford

LEADERSHIP TEAM

Rory Murphy
Head Boy

I chose to study at Carmel as their results speak for themselves; it is the only outstanding college in the area. After studying at Carmel since 2012, I think I have developed academically and as a person. There is a brilliant support system that has led to great relationships with my peers and teachers. The facilities are state of the art and the standard of teaching is of a very high quality. With the college being small, the teachers were able to focus on our personal goals and for this reason I recommend Carmel VI Form without reservation.

Sophie Whan
Head Girl

Choosing to study at Carmel 6th form was an easy choice for me: after spending 5 years at Carmel, I have witnessed the genuine passion that the staff have for helping each individual student to reach their full potential. This college has such a friendly nature that is present in both the staff and students alike - the inclusive, welcoming aspect makes all students feel at ease as they begin to study their A-levels. I will leave Carmel knowing that I have received an outstanding education.

Ethan Lansdell
Deputy Head Boy

I chose to come to Carmel Sixth Form, I became a student there in 2012 and spent 5 years making friends with fellow students and enjoying the support of my teachers. This made me realise what a welcoming and inclusive place Carmel which naturally made me want to stay into Sixth Form. The academic success and good reputation of the college was also a 'big pull' factor for me as I aim to get good results in order to go on to further education.

Rebecca Court
Deputy Head Girl

Upon visiting Carmel for the first time, the welcoming atmosphere and the emphasis on academic excellence made it stand out for me in comparison to other colleges. The opportunities offered, its manageable size and its reputation convinced me I would be comfortable to move here to study; it hasn't disappointed. There is a great sense of acceptance and geniality amongst students, and your teachers really know you as individuals and are always prepared to help you outside of lesson time. I couldn't recommend it enough.

Euan Mulholland
Deputy Head Boy

As an external student I chose Carmel as it compared well in comparison to other Sixth Forms in the local area: the percentage achieving A*/A was significantly higher and I felt that I would achieve much better success coming to Carmel as the standard of teaching is very high. I was made to feel very welcome when I joined and would recommend to other students coming from other schools to come here for Sixth Form.

Kate Cowan
Deputy Head Girl

I chose to come to Carmel Sixth Form because the outstanding teaching and excellent facilities offered me so many exciting opportunities. I am very proud of the variety of activities I fully engaged with throughout my time here - from sports and awards to leadership. The learning and pastoral team guided me throughout my two years, ensuring that I achieved my potential and were very supportive and encouraging when I completed my applications for Higher Education. I truly believe that everyone should experience this unique Carmel Community for themselves.

EXTENDED LEADERSHIP

The Extended Leadership Team consists of four teams, offering something for everyone. We work together to enrich the time spent at Carmel VI Form and below are the aims and purposes of each of our teams.

Academic Strength

Carmel VI Form offers many opportunities for students to achieve academically, develop their knowledge, and engage with the arts, whilst broadening their views and beliefs. Academic strength not only provides students with any support they might require, but also allows them to take their learning a step further by providing the opportunity to lead revision sessions or help out in lower school lessons. The VI Form offers a variety of experiences to celebrate and enhance academic achievement, ranging from topical debates and discussion groups to a regional 'University Challenge'. Academic Strength endeavours to ensure that every student receives the support necessary for their time at college, as well as enjoying the many experiences offered to students at Carmel allowing them to grow intellectually.

Sport

Carmel VI Form showcases a wide variety of sporting activities, to suit all student's abilities and interests. Carmel offers opportunities to compete against other colleges in the North East of England in a range of sports: football, netball, hockey, volleyball and more. The college also holds extensive inter-form sports' competitions for all e.g. 5-a-side football, rounders, and cricket competitions.

Spiritual Depth

The Spiritual Depth team at Carmel aim to promote religion as an active part of college life, focussing on our values: compassion, community and charity. The VI Form encourages students of all faith backgrounds to feel part of a community that provides them with spiritual guidance as well as the opportunity for spiritual growth. Spiritual Depth offers students opportunities throughout the year to become involved with religious celebrations and gatherings, a wealth of charity events for HCPT and CAFOD, and even experience a pilgrimage to Lourdes.

Events and Fundraising

The Fundraising and Events Team organise many events throughout the college to raise funds for causes such as the HCPT Lourdes group and Project Peru. These events take place throughout the year and are the embodiment of the community spirit here at Carmel. The team look forward to welcoming you to share in the exciting opportunities that Carmel has to offer.

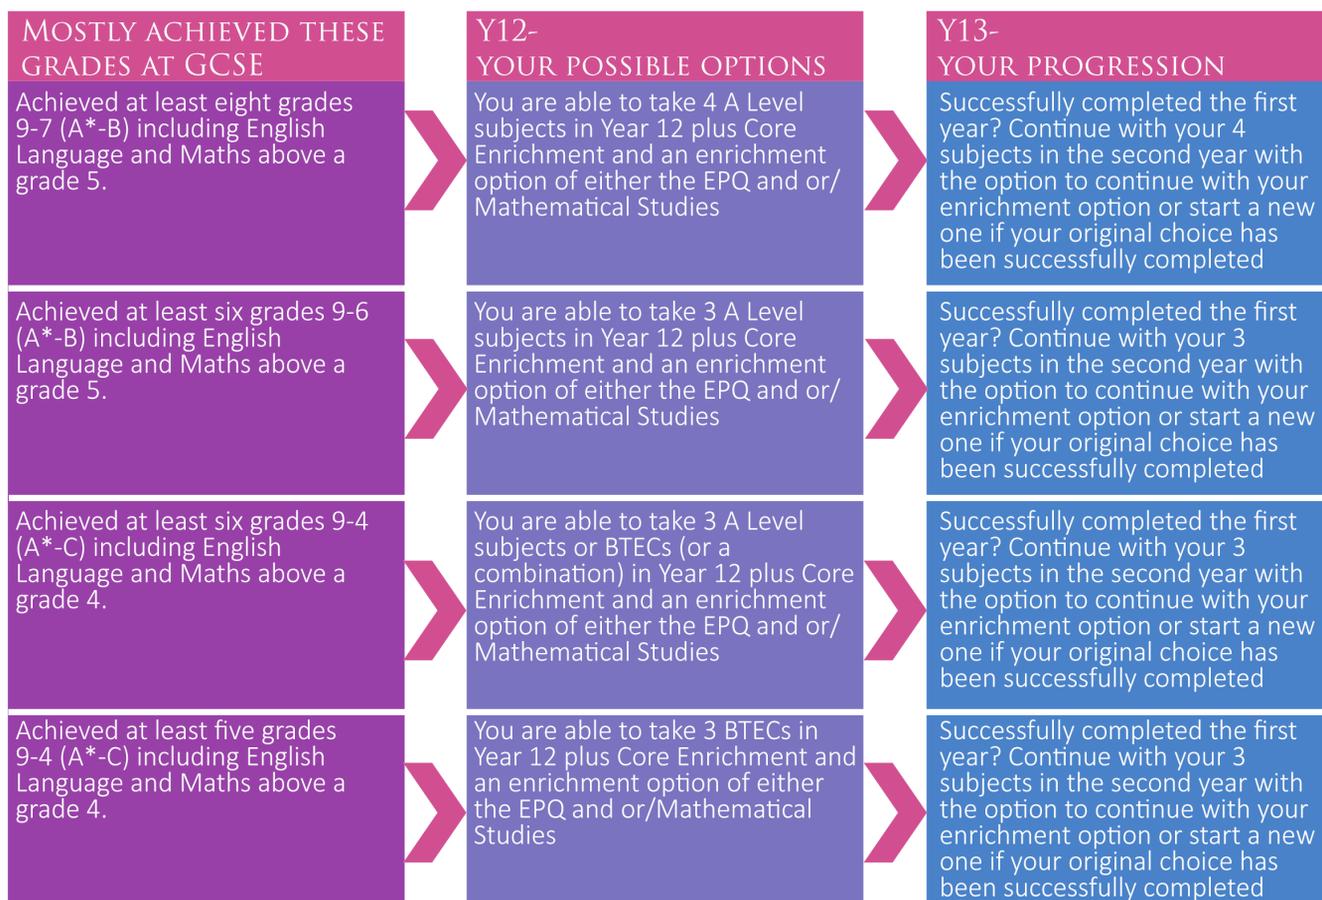

YOUR APPLICATION

At Carmel College we treat all applications in exactly the same way. Entrance to the VI Form is not based on religious affiliation. Any candidate who meets our conditions will be invited in for a consultation and places are offered on commitment and merit. Our entry requirements are at least 5 GCSEs at grade 9-4, including English Language, Maths and any other subject-based grades specified. We pride ourselves on attracting the best students from many different schools and look forward to receiving your application.

WHERE ARE YOU NOW?

This is just a guide. However, you will have an opportunity to discuss the number of courses you study when you speak to the VI Form Team.

HOW DO I FIND OUT MORE?

Application forms are available from the College and an online version can be found on the College website at www.carmel6.org.uk/apply. For more information please contact Loraine Dodds, VI Form Administrator on ldodds@carmel.org.uk or call 01325 523421.

THE PROGRAMME

The Extended Project Qualification (EPQ) is a stand alone qualification designed to extend and develop students' skills in independent research and project management. The EPQ is awarded UCAS points worth half an A Level and is recognised by universities and employers; some leading universities make alternative offers to students undertaking an EPQ.

The EPQ requires students to carry out research on a topic that they have chosen and is not covered by the other qualifications. They then use this research to produce a written report and, in the case of practical projects, an artefact or a production. A student can take inspiration from something studied in class or something completely unrelated to their studies.

What does it involve?

Students work independently with a staff supervisor for an hour a week to undertake a research project of their choice, producing either a 5,000 word research project or an artefact supported by a 1,000 word research document. The assessment rewards learning process over final product; a successful EPQ student will need the skills to work independently. All our students, no matter what their course of study, are able to add this qualification to their programme.

WHY STUDY THIS SUBJECT?

The EPQ is an independent research project where you can learn about and begin to develop the higher level skills that are essential for university study. You can visit university libraries to gain an insight into the size and scale of them and to experience studying in that environment. The EPQ is increasingly popular with universities looking for candidates who can demonstrate their ability to conduct detailed, independent research in the manner that is expected of a higher education student:

"...the potential benefits of extended projects are enormous ... Cambridge is one of many universities which support extended projects as good preparation for degree-level study."

"As a research-intensive university, Manchester is very supportive of the skills that the Extended Project encourages learners to develop."

"Nearly 1 in 5 successful applicants to Durham had completed the EPQ"

- The Sunday Times 16 Feb 2014.

CAREER POSSIBILITIES

The EPQ is a great addition to any CV as you can tailor the research topic to suit your needs. This allows you to focus on your own area of interest and spend time investigating this in detail, achieving a qualification, as well as developing the skills, knowledge and confidence that will help you in both job and university interviews.

ART (FINE ART)

FINE ART AS - 7242/C 7242/X
FINE ART A LEVEL - 7202/C 7202/X

THE PROGRAMME

Students are required to produce two coursework and exam units over the two year course. Candidates will develop a coursework portfolio based on given themes, such as “Music”, “Structures”, “Feast for the Eyes” and “Surfaces”. The GCSE Art course requires students to work in sketchbooks, researching and developing ideas, towards a final outcome. All units of work will include looking at the work of other artists and designers, supported by visits to galleries and museums.

Teaching is directed at the needs, strengths and interests of the individual student. All units of work are tailored to allow the individual to explore original and creative solutions in any or several of the following techniques: print making, sculpture, photography and ICT, painting and drawing, mixed media and collage relief techniques.

There is a balance of learning activities, which include specific skill and technical instruction, self and peer assessment and one to one tutorials. The exam board we use is AQA and the A Level will be assessed on students personal investigation unit worth 60%, including a 3,000 word essay and an externally set unit worth 40%, including a 15 hour practical exam. This is internally marked and externally moderated. For students opting to only complete AS, the coursework portfolio (60%) and externally set unit (40%) is internally marked and externally moderated.

WHY STUDY THIS SUBJECT?

Art enhances fine motor skills, hand-eye co-ordination, problem solving skills, lateral thinking, complex analysis and critical thinking skills. No matter what career you choose, those who can arrange, present and display material in a way that is aesthetically pleasing have an advantage. Art makes us look at things anew, appreciate beauty, embrace diversity, it broadens our cultural horizons and develops our personal resources.

Communicating with colour and shape and form awakens the imagination, sharpens our senses and expresses our identity. If you love making art, you'll miss it when it's gone. If you do choose to study Art, it is likely to be your favourite class of the day.

CAREER POSSIBILITIES

There is a wide variety of careers that you could follow with an art qualification: graphic designer, packaging designer, milliner, photographer, stylist, advertising designer, architect, fashion designer, video editor, web design, film director, jeweller, animator, children's book illustrator, cartoonist, interior designer, stage/costume designer, fashion journalist, printmaker, fabric designer, camera operator, self-employed artist or a teacher.

CAREER POSSIBILITIES

Biology develops the skills of planning, evidence gathering, analysis and critical thinking. As well as the more obvious career links such as medicine, dentistry, nursing, ecology, veterinary medicine, etc., it is looked favourably upon for a large number of non-science careers and courses, including Law, Computing, Accountancy, Teaching and Sports Science. This list is by no means exhaustive and there is a huge number of other careers and degree courses which look favourably on Biology. Biology clearly combines well with the other science subjects and mathematics but is also commonly taken alongside subjects such as psychology, sport and geography.

THE PROGRAMME

In Year 12 (and AS) biology students will study: Cell structure and Microscopy; Biochemistry; Nucleotides and Nucleic Acids; Enzymes; Biological Membranes; Cell Division, Cell Diversity and Cellular Organisation; Exchange with the environment; Transport in animals; Transport in plants; The immune system and disease; Biodiversity; Classification and evolution. For the full A Level, all of the above topics are studied, plus: Communication and homeostasis; Excretion; Nervous Communication; Hormonal Communication; Responses to change; Photosynthesis; Respiration; Genetics and Cellular control; Patterns of Inheritance; Manipulating Genomes; Cloning and Biotechnology; Ecosystems; Populations and Sustainability.

During VI Form lessons, you will experience various teaching methods and styles such as demonstrations, practical work, lectures, handouts/notes, ICT work and one-to-one support. You will be expected to work much more on your own than you did at GCSE and to take a greater responsibility for your own organisation and learning.

There are five main areas that A Level students need to be prepared for: organising time, coping with workload, note-taking, reading around the subject and self-motivation. Students will sit the AS exams at the end of the first year of study. All exams will have questions covering the whole of the relevant subject content – there are no “module” exams – and include a range of question styles: multiple choice, structured questions and longer answer, essay questions.

WHY STUDY THIS SUBJECT?

Biology is the study of life and is therefore a very wide-ranging subject, examining the functioning and inter-dependence of living organisms from the molecular level, through the microscopic and whole-organism levels, to global issues of ecology and sustainability. Biology is regarded as the youngest of the main sciences and every day there are new discoveries being made as more and more focus is given to biological research, which is a rapidly-expanding field. Many of the big challenges that face the world in the 21st century, such as coping with climate change, feeding an expanding population, combatting disease, etc. will all need to be answered with the help of biologists.

BUSINESS

WJEC EDUQAS A LEVEL BUSINESS - A510QSL

THE PROGRAMME

The subject content enables learners to investigate different types and sizes of organisations in various business sectors and environments, drawing on local, national and global contexts. Students will develop an holistic understanding of business and enterprise and be aware of the opportunities and threats of operating in a global marketplace.

They will be expected to be familiar with current issues in business and be able to investigate, analyse and evaluate contemporary business opportunities and problems in a wide range of contexts, whilst recognising how businesses adapt to operate in a dynamic business environment.

Students will gain an understanding of the important role played by small businesses in the economy and the opportunities that exist for entrepreneurs, as well as the importance of established business and not-for-profit organisations in providing goods and services. They will also apply a number of analytical techniques, including decision-making models, investment appraisal tools and ratio analysis, to investigate business opportunities and problems to determine business strategy in a range of contexts.

The following three components are all written exams worth 33% each, taken at the end of the two year course: Business Opportunities and Business Functions, Business Analysis and Strategy, and Business in a Changing World.

Lessons offer a range of engagement and challenging teaching and learning styles, including student led mini - projects to allow development of team building, communication, leadership and many more. These will be a combination of teacher-led, student-led, independent enquiry, independent research projects and mini enterprise challenges.

WHY STUDY THIS SUBJECT?

This A Level specification introduces learners to the dynamic business environment and the importance of entrepreneurial activity in creating business opportunities and sustaining business growth. Learners will have the opportunity to develop a wide range of essential skills required for higher education and employment.

The focus of the specification is to nurture an enthusiasm for studying business using contemporary contexts, allowing learners to develop an appreciation of the strategic, complex and inter-related nature of business issues from a local to a global perspective.

CAREER POSSIBILITIES

This course provides a suitable foundation for the study of business or a related area through a range of higher education courses, progression to the next level of vocational qualifications or employment. Other subjects which match well with Business Studies are: Mathematics, Information Technology and Media Studies.

THE PROGRAMME

In Year 12 (and AS) chemistry students will study: Atomic structure; Bonding; Energetics; Kinetics; Chemical Equilibria; Redox Reactions and Equations; Periodicity; Groups 2 & 7 Elements; Alkanes; Halogenoalkanes; Alkenes; Alcohols; Organic analysis.

For the full A Level, all of the above topics are studied, plus thermodynamics; Rate Equations; Equilibrium Constants; Electrode Potentials and Electrochemical cells; Acids and bases; Period 3 elements and their oxides; Transition metals; reactions in Aqueous Solution; Optical isomerism; Aldehydes and ketones; Carboxylic acids; Aromatic Chemistry; Amines; Polymers; Amino Acids, Proteins and DNA; Organic Synthesis; NMR Spectroscopy; Chromatography.

During VI Form lessons, you will experience various teaching methods and styles such as demonstrations, practical work, lectures, handouts/notes, ICT work and one-to-one support. You will be expected to work much more on your own than you did at GCSE and to take a greater responsibility for your own organisation and learning.

There are five main areas that A Level students need to be prepared for: organising time, coping with workload, note-taking, reading around the subject and self-motivation. Students will sit the AS exams at the end of the first year of study. At AS, Papers 1 & 2 are worth 50% each and cover different areas of the syllabus – there are no “module” exams. At A2 there are three papers. Each paper includes a range of question styles: multiple choice, structured questions and longer answer essay questions. Practical skills are now assessed separately and do not contribute marks to the overall A Level grade but will be reported separately at the end of the full A Level course as Pass/Fail on the “Practical Endorsement”.

WHY STUDY THIS SUBJECT?

Chemistry is an incredibly fascinating field of study. Because it is so fundamental to our world, chemistry plays a role in everyone's lives and touches almost every aspect of our existence in some way. Chemistry sometimes is called the “central science” because it connects other sciences to each other, such as biology, physics, geology and environmental science. Chemistry is essential for meeting our basic needs of food, clothing, shelter, health, energy, and clean air, water, and soil. Chemical technologies enrich our quality of life in numerous ways by providing new solutions to problems in health, materials and energy usage. Thus, studying chemistry is useful in preparing us for the real world.

CAREER POSSIBILITIES

Chemistry is a very useful ‘general’ qualification as, like all of the sciences, it develops the skills of planning, evidence gathering, analysis and critical thinking. As well as the more obvious career links such as medicine, dentistry, pharmacy, chemical engineering, pharmaceuticals etc., it is therefore looked favourably upon for a large number of non-science careers and higher education courses, including Law, Computing, Accountancy, Teaching and Sports Science. This list is by no means exhaustive, however, and there is a huge number of other careers and degree courses which look favourably on A Level Chemistry.

COMPUTER SCIENCE

OCR COMPUTER SCIENCE A LEVEL - H446

CAREER POSSIBILITIES

Studying Computer Science opens up possibilities in a wide variety of subject areas and industry sectors. Computer Science is seen as either essential or facilitating in a range of Higher Education subjects such as; Biological, Chemical, Medical and Physical Sciences, Engineering in all its forms, Social Sciences, Maths Economics and Medicine. In addition, Computer Science is a direct route to Software Development, Web Development and Network Engineering among other career paths.

THE PROGRAMME

Computer Scientists are a necessary part of every type of industry and, especially in the digital age, we have the prospect to work in a rewarding environment with many opportunities internationally. Studying Computer Science at A Level will involve learning about the hardware and software aspects of computer systems:

Computer Systems: You will learn about the inner workings of the computer such as the CPU, the exchange of data, software development, data types and legal and ethical issues concerning computers.

Algorithms and Programming: You will develop your understanding of ‘computational thinking’ and apply your knowledge to solving a wide variety of problems. You will learn to use algorithms to describe problems and analyse those problems to their component parts.

In the second year of the A Level, you will also complete a Programming Project. In this non-exam unit, you will analyse, design, develop, test, evaluate and document a program that solves a computationally solvable problem. You will use ‘agile’ development techniques to ensure that your project is completed successfully. The teaching styles are lectures, presentations, practical lessons, coding/programming sessions, individual/paired/group reports, guided research and self-study. For the AS there are two exams over one year and the full A Level (two years) has two exams at 80% and one coursework project at 20%.

WHY STUDY THIS SUBJECT?

While it is true that we will all use computers in our professional and everyday life, not all of us need to be programmers. Computer Science is not simply about programming computers. Studying Computer Science allows us a deeper understanding of the way that computers work and gives us a fuller understanding of the nature of problems and the way that they can be solved successfully. In describing a problem fully, decomposing it to its component parts, we can ensure that a computer, whether electronic or human, can follow the instructions given and ensure that the problem is solved entirely. The computational methods and the thinking involved are applicable to many of the world’s greatest problems. This is why the subject is held in such high regard by engineers, mathematicians, physicists, software developers and the medical profession.

In addition to the direct benefits of understanding computer systems, it is important to note that you might well, in the future, be dealing with computer scientists who will be solving the problems that you face. In this context, it is beneficial to be able to communicate using a common language understood by everyone involved. The transferable skills gained are wide-ranging and useful in many disciplines beyond the computer suite.

THE PROGRAMME

This exciting course looks at how everyday products have been designed and made. You will use a wide variety of tools and equipment which may include work in CAD/CAM, graphics, resistant materials or electronics. It gives you the opportunity to develop skills in designing and making products of high quality. The course comprises 50% coursework and a 50% examination element. The styles of teaching include practical activities, creative design work, modelling, demonstration and practice exam questions.

AS

Paper 1 Written exam: 1 hour 30 minutes 50% of AS

What's assessed Technical principles, Designing and making principles
(Short answer and extended response)

Non-exam assessment (NEA) 50% of AS

What's assessed Single design and make project
Context set by AQA

A Level

Paper 1 Written exam: 2.5 hours 30% of A Level

What's assessed Technical principles
(Mixture of short answer and extended response)

Paper 2 Written exam: 1.5 hours 20% of A Level

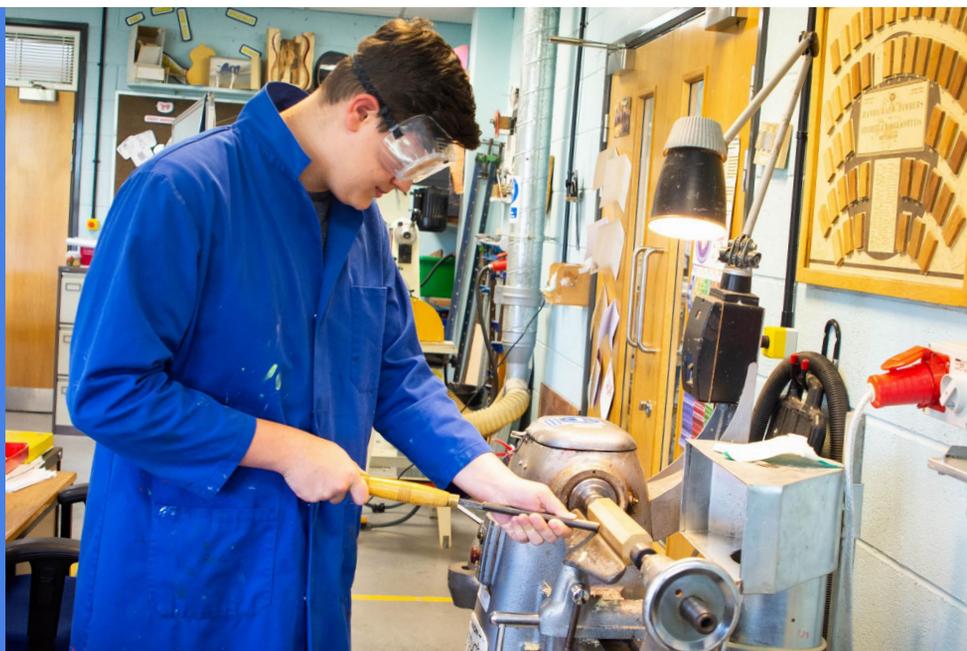

What's assessed Designing and making principles
(Mixture of short answer and extended response questions)

Non-exam assessment (NEA) 50% of A Level

What's assessed Substantial design and make project
Written or digital design portfolio and photographic evidence of final prototype

CAREER POSSIBILITIES

The course is particularly useful to those wishing to go on to careers such as product design, architecture, automotive design, jewellery design, packaging design and some engineering courses, as it combines creativity with a high level of technical understanding.

ENGLISH LANGUAGE

AQA ENGLISH LANGUAGE A LEVEL - 7702

CAREER POSSIBILITIES

The demands of the English Language A level means that students will have acute communication skills, adapting their linguistic choices to suit audience and purpose. These skills will be of use in fields such as journalism, publishing and clerical service. Further to this, the opportunity to explore language change and language acquisition would provide students with knowledge that could be applied to a teaching qualification.

THE PROGRAMME

The AQA A Level English Language covers a broad range of topics which help pupils to develop their subject expertise by exploring key language concepts and engaging with a range of texts and discourses. The English language is constantly evolving and while studying we focus on language as a living thing, a constantly evolving process that provides a unique and insightful view of people and society. The course consists of three broad components: Language the Individual and Society; Language Diversity and Change and Language in Action. These areas cover a range of interesting topics such as: language and ethnicity; child language acquisition; language and occupation and many more. Pupils who study English Language learn to analyse the building blocks of language and investigate the situations that influence how we use it.

The timetabled allocation for English Language is five hours per week and you will have two teachers who deliver different aspects of the course. The course is designed to allow students to create texts and reflect critically on their own processes of production, while analysing the texts produced by others. An emphasis is placed on the ability of students to pursue lines of enquiry, debate different views, and work independently to research aspects of language in use. Pupils will draw on the linguistic experience of their teachers as well as pursue individual lines of enquiry.

The duration of the A Level course is two years, with two written examinations at the end of the course, in which pupils draw together their knowledge, skills and understanding from across the full course of study, alongside a coursework component, which is worth 20% of the overall A Level qualification.

WHY STUDY THIS SUBJECT?

The course makes use of a variety of assessment styles such as data analysis, discursive essays, creative writing and research-based investigative writing. Due to this breadth, students are able to develop a wide range of skills such as critical reading, data analysis, evaluation, the ability to develop and sustain arguments and a number of different writing skills, which are invaluable for both further study and future employment. The multi faceted nature of the course enables students to apply these skills to other curriculum areas such as, history, philosophy and ethics and English Literature.

THE PROGRAMME

Students will begin their A Level study by first exploring 'Texts and Genres'. Within this module, students will be exploring the genre of Tragedy, studying texts such as, 'The Great Gatsby', 'Othello' and an anthology of poetry connected to the genre. Their learning within the module will focus upon tragic aspects such as; the type of the tragic text itself, whether it is classical and about public figures or domestic and about representations of ordinary people; the settings for the tragedy, both places and times; the journey towards death of the protagonists, their flaws, pride and folly, their blindness and insight and the role of fate.

Students will then move on to explore 'Elements of Social and Protest Writing'. The social and protest genre covers representations of both public and private settings. All set texts foreground oppression and domination and they all look at the cultures we live in and have lived in over time. They will be exploring dystopian texts such as 'The Handmaid's Tale' and post modernist texts such as 'The Kite Runner'.

Students will need to consider the specific elements that exist in each of their texts. The elements that might be explored could be; the type of the text itself, whether it is a post-modern novel, science fiction, satirical poetry, historical and political drama.

WHY STUDY THIS SUBJECT?

A Level English Literature offers students the opportunity to develop inference and deduction skills which are particularly useful to careers and courses that require you to break down rhetoric and formulate an informed argument. The content of the course enables students to explore the study of literature through the lens of genre and theory, which in turn encourages the independent study of a range of texts within a shared context.

This unifying approach facilitates the inclusion of a range of wider reading, thus extending students' experience and appreciation of literature beyond core set texts. This course allows students the autonomy to explore, debate and tackle challenging literary concepts and shape their understanding of the world around them.

CAREER POSSIBILITIES

Careers that centre on the ability to debate and evaluate evidence, such as those in the field of law (police/solicitor etc.) would find A Level English Literature a useful course to pursue. Alternatively, their immersion in a range of texts from different eras would provide a firm literary background to draw creative inspiration from. As a consequence, careers in the creative arts, or even curatorship, would benefit from this wide breadth of literary knowledge.

GEOGRAPHY

AQA GEOGRAPHY A LEVEL - 7037

CAREER POSSIBILITIES

Many careers value the skills gained from a geography A Level, whether that be town planning, estate management, meteorology, environmental management or GIS. Subjects which go particularly well with Geography are Biology, Sociology, English or Maths. We are in the unusual position of being both an Arts and Scientific area of study, which enables purely science based students to continue to develop their literacy skills, while also allowing arts based students to maintain statistical and mathematical skills.

THE PROGRAMME

The A Level consists of 3 elements – a physical paper, a human paper and an a non examined assessment which is a coursework component of between 3000-4000 words. The physical paper consists of water and the carbon cycle, hazards and coasts. On the human paper students study contemporary urban environments, changing places changing spaces and global governance.

Some of the material on both the physical and human elements is relatively unfamiliar to students so there is an opportunity to really stretch and develop students' understanding of the world in which they live in new and exciting ways, whilst also building on existing knowledge. Students are also required to be involved in 4 days of fieldwork to help them decide on a suitable coursework topic.

There is a range of teaching styles from seminars, presentations and lectures and students are expected to have an awareness of contemporary issues in the news. The A Level course is linear with 2 terminal exams, one for the physical topics and one for the human topics, each of 2 hours 30mins. They will be a mixture of short multiple choice questions moving up to longer, 20 mark, extended prose questions. In addition, students must complete a piece of fieldwork consisting of minimum of four days' work in the field. This geographical investigation will be marked in school and should be between 3000-4000 words.

WHY STUDY THIS SUBJECT?

Studying geography allows students to have a much deeper and fuller understanding of the changing world in which they live. We teach students to question cause and effect, why issues happen and the implication on people and places and this can be as diverse as who owns Antarctica and how that wilderness can be managed to the role of water supply in the Israeli/Palestinian conflict.

Geography is a highly respected academic A Level and many students who have a science background and who study geography have commented upon how valuable the written element of the course has been as they have progressed to degree level study. We aim to give our geography students the tools and curiosity to enquire and discover more about the places and spaces of this increasingly globalised world in which they live.

THE PROGRAMME

A Level history at Carmel offers students the opportunity to study 3 topics in great detail over the course of 2 years. These include:

- The Tudors: England , 1485-1603
- France in Revolution, 1774-1815
- Personal Enquiry

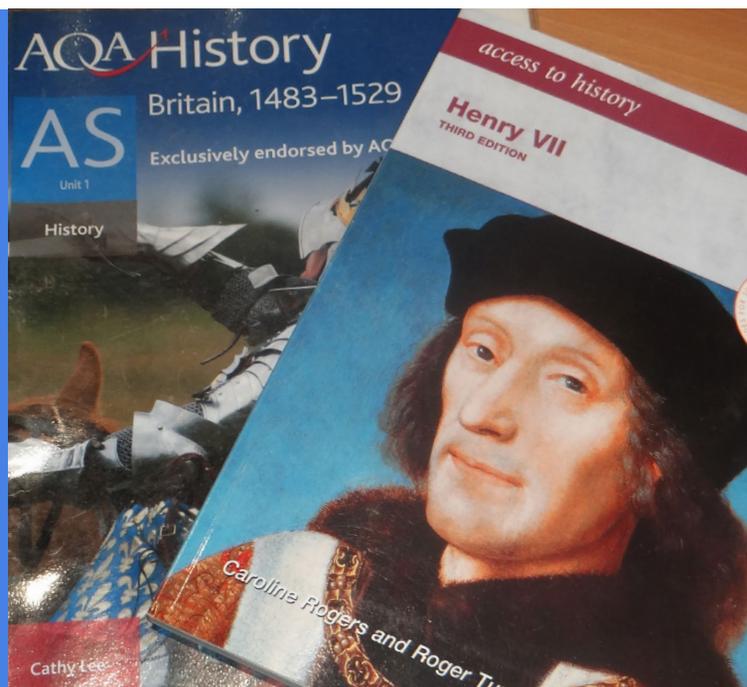

In Year 12, students study Henry VII and Henry VIII, as well as the background to the French Revolution and the Revolution itself. For example, students debate the factors leading to Tudor Rebellions, riots in Paris, the outbreaks of war and the numerous consequences, while in Year 13 they continue to study Elizabeth's reign, as well as Napoleon's rule. In Year 13, students also undertake a personal enquiry of 3500-4000 words, covering 100 years of history from a choice of options.

Teaching at A Level takes on many forms including lectures, presentations, group work and project work. The course is a 2-year programme of study.

At the end of the 2 year course, students need to submit their personal enquiry as well as sit 2 x 2.5 hour examinations on the topics covered in the two years of study.

CAREER POSSIBILITIES

History helps with a number of career opportunities, some directly connected to the study of history and others where the skills can be transferred. These include: law, archaeology, museum work, teacher (primary and secondary), university lecturer, civil service, politics and journalism. History complements a number of other subjects including other written subjects such as English, Geography, Philosophy and Ethics. It is also a popular subject for students who are studying sciences and maths and wish to have a subject that contrasts with their options and allows the opportunity to study a subject that requires extensive written work.

WHY STUDY THIS SUBJECT?

History is not only about the past. History is understanding where we are now, how we got here, understanding the mistakes and the successes that have been made and seeing how the past shapes our world today.

It also offers the opportunity to study some fascinating and interesting areas of history, the individuals who shaped it and to see correlations between events from hundreds of years ago and their sometimes frightening similarity to today.

MATHEMATICS

OCR MATHEMATICS AS LEVEL - H230
OCR MATHEMATICS A LEVEL - H240

CAREER POSSIBILITIES

A Level mathematics complements and supports many other subjects at A Level including sciences, social sciences, geography and economics, or you may choose to study it simply because you enjoy it. Students at Carmel who have studied A Level mathematics have gone on to study a wide variety of undergraduate courses ranging from fashion buying to illustration, as well as more traditional subjects such as engineering, medicine and law. Research has shown that students who have studied A Level Mathematics have gone on to earn 10% more than those who didn't.

THE PROGRAMME

The course provides a broad and widely applicable base of mathematical knowledge, including rigorous treatment of calculus and proof alongside statistics and mechanics, preparing learners for a wide range of destinations in higher education and employment. All aspects of the course are compulsory. It emphasises how mathematical ideas are interconnected and how mathematics can be applied to model situations mathematically, using algebra and other representations, to help make sense of data, to understand the physical world and to solve problems in a variety of contexts, including social sciences and business.

The mechanics element of the course strongly supports students studying physics. A new feature of A Level maths will be to use a large data set of pre-released material, which will be used throughout the course. It will be necessary for students to purchase a new calculator with specific functions that will allow them to work with real data and explore it with appropriate technology. We would strongly recommend students to wait before beginning the course when they will be advised on which calculator to purchase. Students will find A Level lessons similar to those at GCSE, with the teacher introducing a topic and demonstrating how to solve problems with students contributing to solutions. Regular homework is set to allow students to practise and consolidate their learning. AS exams will be taken at the end of Year 12 before we embark on the A2 course for those who wish to continue studying mathematics in Year 13.

WHY STUDY THIS SUBJECT?

If you enjoy Mathematics and are confident with the work you have met so far at GCSE, A Level Mathematics could be the course for you. Students enjoy its challenge, its clarity and the fact that you know when you are right. The solution of a problem has an excitement and a satisfaction. Mathematics is good training for the mind, helping to develop logical thinking and problem-solving skills – the kind of analytical processes that have helped solve problems of all kinds for thousands of years. It is a demanding and challenging subject but it can be an extremely rewarding one if you are prepared to put in time and effort. Mathematics is classed by the Russell Group Universities as a facilitating subject for Maths and Science-based degree courses.

MATHEMATICS(FURTHER)

23

OCR FURTHER MATHEMATICS AS - H235
OCR FURTHER MATHEMATICS A LEVEL - H245

CAREER POSSIBILITIES

University and future employers are able to distinguish students who have studied Further Mathematics as able mathematicians in their applications for courses and jobs. Students at Carmel who have studied A Level Further Mathematics have gone on to study a wide variety of undergraduate courses ranging from medicine and music, to more typical subjects such as mathematics, physics and engineering. Students have also gone on to train as accountants in local firms.

THE PROGRAMME

Further Mathematics is a second A Level in Mathematics which can only be studied if A Level Mathematics is also being studied. Further Mathematics both extends and deepens your knowledge and understanding beyond the standard A Level Mathematics. Students will study different areas of pure mathematics, mechanics and statistics than in A Level Mathematics. Students will broaden their knowledge into other areas of pure mathematics, that underpin further study, with complex numbers, matrices, polar coordinates and hyperbolic functions. In statistics, content includes combinatorics, probability distributions for discrete and continuous random variables, hypothesis tests and confidence intervals for a population mean, squared tests, non-parametric tests, correlation and regression. In mechanics, students use their extended pure mathematical knowledge to explore more complex physical systems. The area covers dimensional analysis, work, energy, power, impulse, momentum, centres of mass, circular motion and variable force.

Students gain two A Levels, one in Mathematics and one in Further Mathematics and consequently have twice as many maths lessons as A Level maths students. Students will take AS exams in Further Mathematics at the end of Year 12, alongside AS exams in Mathematics, before continuing with the A2 Further Mathematics course if they wish. We have had a number of students in previous years who have studied Further Mathematics to AS level only.

WHY STUDY THIS SUBJECT?

Further Mathematics is an ideal subject for the most academic students who wish to immerse themselves in maths. Students who take Further Mathematics are generally students who can master the more demanding concepts in GCSE mathematics quickly and easily. Students who take Further Mathematics find that the additional time spent studying mathematics boosts their marks in A Level Mathematics. It makes the transition from VI Form to university courses, which are mathematically rich, that much easier as much of the first year course content will be familiar. If you are planning to take a degree such as Engineering, Sciences, Computing, Finance, Economics, etc., or perhaps Mathematics itself, at the more selective universities, you will benefit enormously from taking Further Mathematics, at least to AS level.

AS Further Mathematics introduces new topics such as matrices and complex numbers that are vital in many STEM degrees. Students who have studied Further Mathematics find the transition to such degrees far more straightforward.

MEDIA STUDIES

AQA MEDIA STUDIES A LEVEL- 7572

THE PROGRAMME

Studying A Level Media will enhance your knowledge of the influence the media and cultural industry has on people's lives. You will benefit from analysing a range of media platforms, including the rapidly developing digital media. You will explore issues of representation in the media and the influence this has upon wider society. You will also be given the opportunity to take an active part in planning and creating media, developing media production skills and using industry standard software. You will be able to take advantage of the opportunity to research topics of interest to you, researching contemporary subjects across TV, film, news and music. The course is for two years and this qualification is linear. Linear means that students will sit all their exams and submit all their non-exam assessment at the end of the course.

The core content includes: media language, media representation, media industries and media audiences. Exam questions will focus on issues and debates in the media. Students will be expected to use any relevant elements of the theoretical framework in order to explore the ideas in the paper. Other questions will focus on the analysis of media products, through the lens of the theoretical framework. Non-exam assessment focuses on the creation of a media product demonstrating practical skills relating to a media format of their choice.

WHY STUDY THIS SUBJECT?

Media is extremely interesting and fun with a hands on approach (production of media). The content is very relevant to today and the world in which you, the younger generation live. Therefore, you will no doubt find it fascinating to compare a range of cultures across the globe; specifically how technology influences us and our behaviours (e.g. representations of different social groups and how these stereotypes influence the way in which we think/act. Media studies is beneficial on a wider contextual basis.

It will develop skills that will stand out in a UCAS application and when being interviewed for career opportunities. You will be encouraged to examine media texts across the platforms and to research current news affairs and the negative/positive influences they have in shaping identities. Furthermore, it will also develop your persuasive skills, as you closely examine media texts and examples.

CAREER POSSIBILITIES

There is a plethora of career opportunities with Media Studies, for example: multimedia specialist, writer, market researcher, TV/Film producer, programme researcher, Public relations, Advertising account executive, magazine journalist, editorial assistant, broadcast journalist and many more!

MODERN FOREIGN LANGUAGES

AQA FRENCH AS - 7651, AQA FRENCH A LEVEL - 7652
AQA SPANISH AS - 7691, AQA SPANISH A LEVEL - 7692

25

THE PROGRAMME

Students will be exploring aspects of French or Spanish-speaking societies, including current trends and issues, as well as the artistic culture and the political life in the French or Spanish-speaking world. Some of the sub-themes that will be covered within those main themes include the changing nature of family, the cyber-society, voluntary work, music and cinema, cultural heritage, the diversity in society, political commitment or immigration.

Students will study a film in the first year (El laberinto del fauno or La Haine) and a book in the second year of A Level (Como agua para chocolate in Spanish and L'Étranger in French).

The key skills covered will be reading (authentic magazine articles, online pages), writing (essays, research projects, articles, reviews), listening (authentic radio programmes, video clips, interviews) and speaking (debates, role-playing, videos, presentations). Other skills will include grammar, translation and summary.

AS and A Level students will be assessed through 3 papers: one written exam including listening, reading, summary tasks and translation; another written exam including essay(s) on the film and/or book; an oral exam based on the sub-themes covered in the course and an individual research project at A Level.

The course will include 5 x 1-hour lessons a week with a teacher. Some activities will be based on the textbook, the dedicated online platform Kerboodle, a variety of high-quality material developed by the department or a range of other resources such as magazines, books, etc. All learning styles will be catered for, with a range of engaging, practical activities. Many activities will require students to develop higher-thinking skills, research and communication skills. Students will also have a 30 min. weekly speaking practice to practise their pronunciation, develop the content of their speaking answers and familiarise themselves with the oral examination material.

CAREER POSSIBILITIES

The main career possibilities for language graduates are in education (Language secondary school teacher, teacher of English as a second language, etc.), interpreting and translating and in the tourism and hospitality industry (e.g. tour manager). Other sectors and industries looking for candidates with language skills include the culture sector, business services, charity work, engineering, the media industry, public administration or the fashion industry.

WHY STUDY THIS SUBJECT?

Learning a language is an amazing opportunity to gain a life-long skill which will boost your employability and make your university application stronger. The world is changing fast. More and more companies are going global and recruiters are increasingly looking for globally-minded people who can speak at least one foreign language. It also helps give your brain a boost and become a better learner.

It develops your understanding of your own mother tongue, consolidating your literacy skills and therefore your communication ability. It will also be a real asset in your personal life, allowing you to establish deep connections and cross-cultural friendships or making holidays abroad more accessible and exciting!

MUSIC

AQA MUSIC A LEVEL - 7272

THE PROGRAMME

If you have a love of music, have been successful at GCSE and enjoy the academic study of music as well as the performing and composing then you will enjoy studying the subject at A Level. There are a variety of practical activities which encourage students to perform as often as possible. This includes a series of concerts throughout the year at the college, and students often organise other performance opportunities.

Appraising Music – Written examination. This component is worth 40% of the A Level marks.

Performance – Solo and/or ensemble performing as an instrumentalist/vocalist. A minimum of ten minutes of performance in total is required at A Level. This component is worth 35% of the A Level marks.

Composition – Two compositions with a minimum of four and a half minutes in total is required. This component is worth 25% of the A Level.

Developing and applying the musical knowledge, understanding and skills set out in the specification of this course ensures that students can form a personal and meaningful relationship with music. They will be encouraged to engage critically and creatively with a wide range of music and musical contexts, and reflect on how music is used in the expression of personal and collective identities.

WHY STUDY THIS SUBJECT?

Music offers academic rigour through the study of music theory, history and analysis of musical works, while through composition and performance, independent creativity is developed. A Level Music prepares students for further musical study, should they wish to follow this pathway, or provide a solid foundation for musical participation and enjoyment outside of studies, should a different career path be pursued.

As a VI Form musician you will be expected to play a full part in the musical life of the College, playing in ensembles and taking leadership roles where possible. There are many and varied opportunities for performance, both in and out of College and Carmel musicians are also encouraged to become part of the Durham Music Service ensembles.

CAREER POSSIBILITIES

Studying Music opens the doors to all kinds of careers – and not just the obvious ones like performing, composing and teaching. 'The music industry' can mean anything from working for a record label; broadcasting; selling music for films, TV and advertising; venue or festival management; music journalism; copyright law; music therapy and countless other varied and exciting roles. Former music students find themselves thriving in roles in the business, legal, medical, academic and financial fields.

Music is also a well-respected academic subject for those students wishing to pursue other degree courses at University level.

THE PROGRAMME

Students study this course in Religious Studies with the OCR exam board. This course includes three areas of study, which are:

Philosophy of Religion; Ethics and Religion; Development in Christian Thought

These modules are studied at A Level and examined at the end of the course. Links are assessed across the topics in order to reinforce the learning and critically think about the extensive nature of religious, theological, philosophical and moral issues. The course is delivered utilising a variety of pedagogical methods including: lectures, seminars, workshops, thinking points, student-led presentations and debates.

The course is delivered utilising a variety of pedagogical methods including: lectures, seminars, workshops, thinking points, student-led presentations and debates. If you have studied RE at GCSE, you must have at least achieved an A/B grade. Additionally, you must also have achieved an A/B grade in English.

WHY STUDY THIS SUBJECT?

Religious Studies is incredibly challenging, hugely interesting and extremely rewarding. The course covers some of the most profound questions in the history of humanity, such as 'Does God exist?' 'Is killing always wrong?' 'Why do innocent people suffer?' and 'Are we really free?' Therein, students discover the intrinsic value in reflecting and contemplating, in order to develop and challenge their own ways of thinking.

CAREER POSSIBILITIES

Religious Studies opens many different doors due to its skills being highly marketable, desirable and transferable to a range of academic disciplines, careers and endeavours. Recent students are undertaking further studies in Law, Media Studies, History, Theatre Studies, Medicine and many others, as well as the traditional routes of pure Philosophy, Theology and Biblical Studies. Graduates in Religious Studies gain employment in a wide range of areas, e.g. Teaching, Counselling, the Police, Law, the Service Industry and Medicine.

PHOTOGRAPHY

AQA PHOTOGRAPHY AS - 7246/C 7246/X

AQA PHOTOGRAPHY A LEVEL - 7206/C 7206/X

CAREER POSSIBILITIES

Entry to a Foundation course in Art and Design and / or Degree entry into a specialised area. There is a wide variety of careers that you could follow with a photography qualification, of which the following are a small selection. Wedding Photographer, Architectural Photographer, Cloudscape Photographer, Environmental Photographer, Documentary , Fashion, Food and many more.

THE PROGRAMME

Like GCSE Art, this course requires students to work in sketchbooks researching and developing ideas towards a final outcome. All units of work will include looking at the work of other photographers, artists and designers.

This is supported by photography field trips and visits to galleries. Teaching is directed at the needs, strengths and interests of the individual student. All units of work are tailored to allow the individual to explore original and creative solutions in any or several of the following area(s) of Photography, such as: portraiture, documentary, photo-journalism, environmental photography, still life or experimental imagery.

Students will be introduced to a variety of experiences exploring a range of photographic techniques including digital as well as traditional black and white (silver halide) chemical technique.

Students will develop skills in the following:

- The ability to explore elements of visual language, line, form, colour, pattern and texture in the context of Photography.
- Responding to an issue, theme, concept or idea or working to a brief.
- An appreciation of viewpoint, composition, depth of field and movement; time- based, through such techniques as sequence or frozen moment.
- The appropriate use of the camera, film, lenses, filters and lighting for work in their chosen area of Photography.
- An understanding of techniques related to the developing and printing of photographic images, presentation, layout and mounting.

The exam board we use is AQA and the A Level will be assessed on students personal investigation unit worth 60%, including a 3,000 word essay and an externally set unit worth 40%, including a 15 hour practical exam. This is internally marked and externally moderated. For students opting to only complete AS, the coursework portfolio (60%) and externally set unit (40%) is internally marked and externally moderated.

WHY STUDY THIS SUBJECT?

Through photography we learn to be perceptive, to observe and see interesting things in the world around us. We learn to find the extraordinary in ordinary places. Studying photography develops skills of creative thinking, critical analysis, perseverance, patience, reflection, independent enquiry, collaboration and self-motivation.

PHYSICAL EDUCATION

AQA PHYSICAL EDUCATION AS - 7581
AQA PHYSICAL EDUCATION A LEVEL - 7582

29

THE PROGRAMME

Applied anatomy and physiology; Skill acquisition; Sport and society; Exercise physiology; Biomechanical movement; Sport psychology; Sport and society and The role of technology in physical activity and sport. Practical: performance in physical activity and sport. Students assessed as a performer or coach in the full-sided version of one activity and written/verbal analysis of performance. The style of teaching for this course is a teacher-centred approach through direct teacher instruction and student-centred approach, through enquiry-based and cooperative learning.

The AS assessment process is the following:

Component 1:- 2 hour written paper. 70% of AS level

- 84 marks Factors affecting participation in physical activity and sport

Component 2:- Non-exam assessment: 30% of AS-level

- 45 Marks for Practical performance in physical activity and sport:- Students assessed as a performer in the full sided version of one activity.
- 45 marks for Written/verbal analysis of performance. Internal assessment, external moderation

The A Level assessment includes:

Component 1:- 2 hour written paper 35% of A Level. Factors affecting participation in physical activity and sport

- 105 marks- Applied anatomy and physiology, Skill acquisition, Sport and society

Component 2:- 2 hour written paper 35% of A Level. Factors affecting optimal performance in physical activity and sport

- 105 marks- Exercise physiology and biomechanics, Sports psychology, Sport society and technology

Component 3:- Practical performance in physical activity and sport. 30% of A Level. Internal assessment, externally moderated. 90 marks total

- 45 marks Practical Performance
- 45 marks Analysis and Evaluation

WHY STUDY THIS SUBJECT?

This study will enhance your knowledge and experience of PE and Sport, as well as giving you a deeper understanding of health issues. This A Level offers a multi-disciplinary approach to the study of and participation in sport, play, leisure and recreation, allowing you to study movement, performance and behaviour, in relation to PE. You should enjoy science and looking at how the human body and mind is affected by sport participation and performance and you should also be interested in the place of PE and sport in our society and how the subject has developed opportunities for participation. It goes without saying that you must also enjoy developing and acquiring skills and techniques in a variety of physical activities.

CAREER POSSIBILITIES

Sport & fitness is a huge industry ... and you can be part of it. If you're keen on sport, you can make a healthy living from your passion. Whether that's working for a football club, as a personal trainer at the local gym, or training to be a physiotherapist, there are lots of opportunities. From professional sport through to amateur teams and individuals who just want to get in shape, sport and fitness is a fast-growing business. Best of all, you could be in a career doing something that you love. PE goes well with other subjects. If you want a career in physical education, you might also consider Biology and Psychology. But no matter what your career ambition, if you are passionate about sport, this course is great to take alongside other subjects.

PHYSICS

OCR PHYSICS AS - H156

OCR PHYSICS A LEVEL - H556

THE PROGRAMME

In Year 12 (and AS) physics students will study: Physical quantities and units; Making measurements and analysing data; Nature of quantities; Motion; Forces in action; Work, energy and power; Materials; Momentum; Charge and current; Energy, power and resistance; Electrical circuits; Waves; Quantum physics.

For the full A Level, all of the above topics are studied, plus: Thermal physics; Circular motion; Oscillations; Gravitational fields; Astrophysics and cosmology; Capacitors; Electric fields; Electromagnetism; Nuclear and particle physics; Medical imaging.

During VI Form lessons, you will experience various teaching methods and styles such as demonstrations, practical work, lectures, handouts/notes, ICT work and one-to-one support. You will be expected to work much more on your own than you did at GCSE and to take a greater responsibility for your own organisation and learning. There are five main areas that A Level students need to be prepared for: organising time, coping with workload, note-taking, reading around the subject and self-motivation.

Students will sit the AS exams at the end of the first year of study. At the end of the course, the exams for the full A Level will include questions on the whole of the course i.e. including those topics already examined at AS. All exams will have questions covering the whole of the relevant subject content – there are no “module” exams – and include a range of question styles: multiple choice, structured questions and longer answer essay questions.

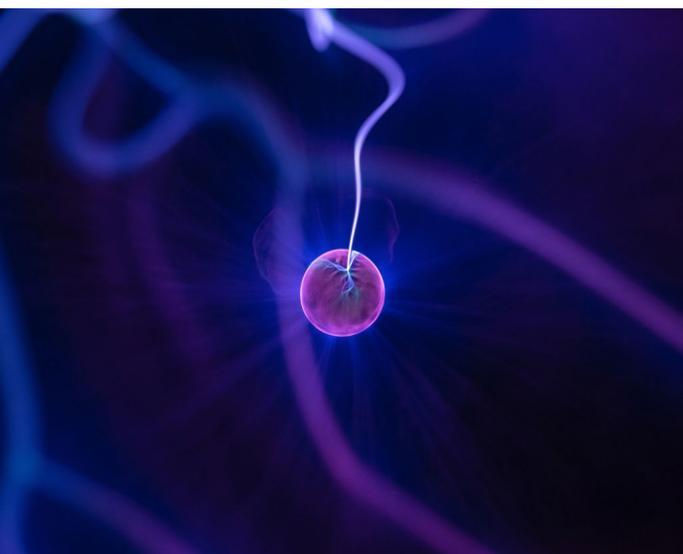

Practical skills are now assessed separately and do not contribute marks to the overall A Level grade but will be reported separately at the end of the full A Level course as Pass/Fail on the “Practical Endorsement”. There is no practical endorsement for AS. Practical skills and knowledge will also be assessed on the written exam papers for both AS and A Level.

WHY STUDY THIS SUBJECT?

It all began with Physics! Physics encompasses the study of the universe from the largest galaxies to the smallest subatomic particles. Physics is crucial to understanding the world around us, the world inside us and the world beyond us. It is the most basic and fundamental science. Physics challenges our imaginations with concepts like relativity and string theory and it leads to great discoveries, like computers and lasers, that led to technologies which change our lives- from healing joints, to curing cancer, to developing sustainable energy solutions. There are countless more examples of research in physics leading to the development of important technologies. It is hoped that today’s research on nanostructures (structures a billion times smaller than a meter), quantum information or photonics (basically electronics with light) will lead to the next generation of technologies including faster and more robust computers and communication systems – you could do that research!

CAREER POSSIBILITIES

Physics brings a broad perspective to any problem. Because they learn how to consider any problem, physicists are not bound by context. This inventive thinking makes physicists desirable in any field: along with mathematicians, physicists have the best job prospects of all graduates. As well as the more obvious careers such as engineering and astronomy, physics qualifications are a great foundation for careers in: Journalism, Law, Finance, Medicine and Computer Science.

THE PROGRAMME

Psychology is the scientific study of the mind and behaviour. The course covers key topics in psychology including: social influence, memory, attachment, abnormality, relationships, schizophrenia and forensic psychology. In addition, you will learn about the different approaches and methods used by psychologists to conduct their research, such as experiments, observations, questionnaires, interviews and case studies.

The full course is two years, at the end of which there will be three written exams, consisting of multiple choice, short question and extended writing questions. The maximum number of marks awarded to any one question is 16, which constitutes an essay in psychology.

It is important to note that 25% of the course is mathematical. Additionally, since it is purely examination based, a willingness to write essays is essential. In lessons, students are required to work in groups, discuss psychological theories and share their ideas. There is also the expectation that students engage in independent reading and practical research.

WHY STUDY THIS SUBJECT?

Psychology is all around you and touches on every aspect of your life! Who you are now, how you will be in the future, how you interact with family, friends and strangers; these are all things that psychology can help you better understand.

Whatever career you pursue, a background in psychology will enhance your employability. Studying psychology can help you understand yourself and other people by learning about aspects of human behaviour that will help you in daily life, including your learning and memory performance, your ability to cope with pressure and your understanding of the causes of psychological disorders.

From intriguing optical illusions that reveal the inner workings of the brain to shocking experiments that expose how far people will go to obey an authority figure, there is always something amazing and even astonishing to learn about the human mind and behaviour.

CAREER POSSIBILITIES

The course will provide you with a solid foundation into the key topic areas as well as a range of skills that will be relevant to many different careers. A few possible careers include: Counsellor, Teaching, Police, Social Work, Health Care and Management. Since Psychology is a science, other science subjects, especially Biology, will combine well with the subject. The subject also involves extended writing and so any other subject that is assessed through essay writing will help to develop this skill.

SOCIOLOGY

AQA SOCIOLOGY AS - 7191

AQA SOCIOLOGY A LEVEL - 7192

THE PROGRAMME

Sociology is the systematic study of social behaviour, its origins, development and the impact of different institutions on individuals. The subject looks for patterns and relationships between areas such as the family and the British education system and the life chances of certain social groups. In sociology, students learn to relate sociological theories, such as Functionalism, Marxism, Feminism and Postmodernism to everyday experiences. Social inequality and moral issues are debated, and students often find they begin to question many social experiences they have previously taken for granted. The subject explores contemporary topics such as gender patterns in criminal behaviour, differing educational achievement across a variety of ethnic groups and changing roles of the family considering reasons for these differences.

The A Level qualification is comprised of three units, each being assessed by an examination at the end of the two-year period.

Unit 1 – Education with Theory and Methods

Unit 2 – Family and Household and Beliefs in Society

Unit 3 – Crime and Deviance with Theory and Methods

An avid interest in both political events and current affairs is vital, with students needing to be continually aware of issues and debates in contemporary society. It is an essay-based subject and so a willingness to formulate arguments is also essential.

CAREER POSSIBILITIES

The course provides students with a wide range of career paths, such as: Social researcher, Journalist, Legal work, Police work, Social work, Health care, Politics, Management, Teaching and Welfare officer. Sociology is an ideal subject for students who are considering careers in numerous areas of contemporary society and it develops many transferable skills, such as communication, analysis, evaluation and literacy.

WHY STUDY THIS SUBJECT?

Sociology is a discipline highly regarded by universities and employers alike. The course helps to develop a variety of skills that will be relevant to a broad range of careers. In lessons, students are expected to participate fully in group work, complete extended writing and formulate a balanced argument. In addition, communication skills will be developed along with an increased awareness of social diversity.

TEXTILES

AQA TEXTILES AS - 7244/C 7244/X
AQA TEXTILES A LEVEL - 7204/C 7204/X

33

THE PROGRAMME

Students will complete two coursework and one exam units over the two years. This course requires students to work in sketchbooks, researching and developing ideas towards a final outcome. The first project will be focused on skill building and candidates will develop a coursework portfolio based on 'Life's a beach' leading to the designing and making of a bodice. All units of work will include looking at the work of other textile artists and fashion designers, supported by visits to galleries and museums. In Year 13 students will produce a personal, practical investigation of their own choice, supported by a 3,000 word written reflection.

This is followed by an externally-set exam unit, where students can choose from a range of themes that is developed into a final response in a 15 hour practical exam. Students will be introduced to a wide range of new techniques and media, beginning with observational drawing and sampling in sketchbooks. They will explore and experiment with a range of textile techniques, such as silk painting, appliqué, fabric transfer, machine embroidery, printmaking and batik, before designing and making individual outcomes which can include fashion outcomes, accessories or wall hangings. Teaching is directed at the needs, strengths and interests of the individual student.

All units of work are tailored to allow the individual to explore original and creative solutions in any or several of the techniques they have experienced. Teaching includes activities to demonstrate different skills and technical work, self and peer assessment and one to one tutorials. The exam board we use is AQA and the A Level will be assessed on students personal investigation unit worth 60%, including a 3,000 word essay and an externally set unit worth 40%, including a 15 hour practical exam. This is internally marked and externally moderated. For students opting to only complete AS, the coursework portfolio (60%) and externally set unit (40%) is internally marked and externally moderated.

WHY STUDY THIS SUBJECT?

Textiles embraces creativity and will give a grounding in a broad range of skills which play an important role in today's design world. Transferable skills such as complex analysis and critical thinking will help in any career you choose.

This course will allow you to develop desirable skills that universities and employers would look for, such as being able to work towards deadlines, being organised, having a strong work ethic, good communication skills, IT literacy and flexibility. Textiles allows you to be creative and respond to the world around you through a variety of materials and techniques.

CAREER POSSIBILITIES

There is a wide variety of careers that you could follow with an art textile qualification. The following are a small selection: fashion graphics, fashion designer, packaging designer, milliner, photographer, stylist, advertising designer, jeweller, interior designer, stage/costume designer, fashion journalist, marketing manager, printmaker fabric designer, buyer, merchandiser, fashion events' co-ordinator, freelance designer, fashion prediction, shoe and bag design, self-employed artist or teacher!

CHILDREN'S PLAY, LEARNING AND DEVELOPMENT NATIONAL AWARD

PEARSON BTEC LEVEL 3 NATIONAL EXTENDED CERTIFICATE - UFK70

CAREER POSSIBILITIES

The early years sector in England is made up of over 80,000 settings, with 1.3 million childcare places for children under five. This ranges from childminders and nannies, to nurseries, crèches and pre-schools. Alongside the care provision, the sector has further career paths for students interested in working with children. Degree courses in teaching Early Years, Primary or Secondary; speech therapy, social work, special education and playwork offer additional opportunities in the sector.

THE PROGRAMME

A broad basis of study of the early years' sector. This qualification is designed to support progression to higher education when taken as part of a programme of study that includes other appropriate BTEC Nationals or A Levels. This is a two year course, equivalent in size to one A Level.

Students taking this qualification will study three mandatory units, which cover the following topics: children's development, communication and numeracy and play and learning. Students will complete 50 hours of work experience in the sector. We then select one option unit, which supports students' progression to specialised degree programmes within the sector and covers areas such as: safeguarding, the early years' foundation stage, physical development, care and health needs.

Units are a mix of two mandatory external exams and two internal assessments. There are three main forms of assessment that you need to be aware of: external, internal and synoptic. Externally-assessed units:- Each external assessment for a BTEC National is linked to a specific unit. Each assessment is taken under specified conditions, then marked by Pearson and a grade awarded. The styles of external assessment used for qualifications in the Children's Play, Learning and Development suite are:

Examinations- all learners take the same assessment at the same time, normally with a written outcome;

Set Tasks - learners take the assessment during a defined window and demonstrate understanding through completion of a vocational task; internally-assessed units- most units in the sector are internally assessed and subject to external standards' verification;

Synoptic assessment - Synoptic assessment requires learners to demonstrate that they can identify and use effectively, in an integrated way, an appropriate selection of skills, techniques, concepts, theories and knowledge from across the whole sector, as relevant to a key task.

WHY STUDY THIS SUBJECT?

Would you love a career surrounded by the boundless energy, enthusiasm and optimism that comes from working with children? The aim of the course is to equip you with both knowledge and skills to care for young children in a wide variety of settings (day nurseries, children's centres, reception class, infant class, nursery class, special school, child-minders and family refuge centres) so the content reflects the breadth of work opportunities and experiences to enable you to do so.

THE PROGRAMME

A broad basis of study for the health and social care sector, this qualification is designed to support progression to higher education, when taken as part of a programme of study that includes other appropriate BTEC Nationals or A Levels. The qualification studied over 2 years is equivalent in size to one A Level. There are 4 units of which 3 are mandatory and 2 of these are externally assessed. Mandatory content (83%). External assessment (58%).

The mandatory content of the qualification incorporates topics relevant across the health and social care sector:

- Human Lifespan Development
- Working in Health and Social Care
- Meeting Individual Care and Support Needs

The optional unit delivered:

- Supporting Individuals with Additional Needs

There are three main forms of assessment that you need to be aware of: external, internal and synoptic. The styles of external assessment used for qualifications in the Health and Social Care suite are: examinations – all learners take the same assessment at the same time, normally with a written outcome. Set tasks – learners take the assessment during a defined window and demonstrate understanding through completion of a vocational task. Most units in the sector are internally assessed and subject to external standards' verification. Synoptic assessment requires learners to demonstrate that they can identify and use effectively, in an integrated way, an appropriate selection of skills, techniques, concepts, theories and knowledge from across the whole sector, as relevant to a key task.

WHY STUDY THIS SUBJECT?

This qualification will provide the opportunity for full-time learners to enter employment in the health and social care sector or to progress to vocational qualifications. It also gives the opportunity for learners to develop a range of skills and techniques, personal skills and attributes essential for successful performance in working life.

CAREER POSSIBILITIES

Students have the opportunity to consider a range of options within each vocational pathway - health, social care and early years' care and education. It provides an excellent basis for a wide range of higher education courses and careers: Radiography, Midwifery and nursing, Paramedic science, Podiatry, Healthcare science, NHS Practitioner Training Programme and many more opportunities. Many past students find themselves in caring roles, midwifery, childcare and sports physiotherapy to name but a few. You can use an Extended Diploma to progress onto a degree in: BSc (Hons) in Nursing, BA (Hons) in Social Work, BSc (Hons) in Physiotherapy, BSc (Hons) in Occupational Therapy, BSc (Hons) in Speech Therapy and BA (Hons) in Health and Social Care.

MATHEMATICAL STUDIES

AQA LEVEL 3 MATHEMATICAL STUDIES - 1350

THE PROGRAMME

Mathematical Studies is A Level 3 qualification, equivalent to an AS level in terms of UCAS points. There are 2 exams taken at the end of the course, with an element of pre-release material issued for both papers. You can decide whether to study the course over 1 or 2 years depending on your other subject choices.

Paper 1 (Compulsory content)

Analysis of Data – building upon knowledge from GCSE, you will gain an appreciation of different types of data and sampling techniques. You will be required to choose effective ways to represent and analyse data, suggesting improvements where appropriate.

Maths for Personal Finance – arguably the most useful topic that you will study during your time in VI form, this element of the qualification will give you an understanding of how to calculate tax, National Insurance and other salary deductions. Additionally, you will learn about interest rates, loans and investments as well as savings and mortgages. You will also learn about the effects of inflation and practise budgeting for real-life scenarios.

Estimation – students will use Fermi estimation techniques to estimate solutions to real-life problems.

Paper 2 (Optional modules)

All optional modules contain one element of compulsory content, Critical Analysis of Data, where students will be required to critically analyse data and suggest improvements.

Option 1: Statistical Techniques- students will study the normal distribution, including finding probabilities and estimating outcomes, as well as correlation and regression.

Option 2: Critical Path Analysis – in addition to critical path analysis, students will study expectation and cost benefit analysis.

Option 3: Graphical Techniques – as well as studying various graphical methods, students will also gain an understanding of rates of change and exponential functions.

WHY STUDY THIS SUBJECT?

There has been a tremendous amount of coverage in the media about the UK's gap in basic maths skills. Only 20% of students study maths beyond GCSE in the UK – the lowest rate in leading developed countries in the world; in Japan, this figure is 85%. This puts young people in the UK at a major disadvantage in a global job market. Mathematical Studies (also known as Core Maths) has been designed to maintain and develop real-life maths skills. What you study is not purely theoretical or abstract; it can be applied on a day-to-day basis in work, study or life and most courses will include a financial maths element. It will also help with other A Level subjects – in particular with science, geography, business studies, psychology and economics.

CAREER POSSIBILITIES

The skills developed in the study of mathematics are increasingly important in the workplace and in higher education; studying Mathematical Studies will enhance these essential skills. Employers from many different sectors acknowledge the importance of the Mathematical Studies' qualification. Many roles in today's workplace require high levels of budget management and problem-solving skills; Mathematical Studies will be a useful tool in equipping you with these skills.

CAREER POSSIBILITIES

This vocational course is designed to give you the skills to go to University or Drama School, pursue an apprenticeship or go straight into the world of work. As well as leading to Performing Arts careers, studying this subject opens up a range of other possibilities in jobs that involve working with people and it is one of the most popular subjects for students interested in studying Law, English and other subjects related to the arts.

THE PROGRAMME

Equivalent in size to 1 A Level, this is a practical, vocational course, suitable for students with a range of previous experience, including those who have not been able to study Performing Arts at school. The course consists of four units of study spread across the two years, developing your practical and written skills to a high standard. Lessons focus primarily on musical theatre skills and many students complete all assessments as an actor, singer and dancer. You can also choose to be assessed on technical, backstage or design skills in some units. Units studied include:

- Investigating a practitioner's work
- Developing skills and techniques for live performance
- Musical Theatre Techniques
- Group workshop performance

WHY STUDY THIS SUBJECT?

Performing arts offers the opportunity to express your talent and determination as part of a varied, skilled and passionate group of performers. Whether you choose to sing, dance, act or to be part of technical team, the confidence and skills gained through completion of this course are invaluable to any given career path.

When comparing surveys of the skills employers want with the subjects offered to VI Form students, the course that best meets the needs of employers is Performing Arts. You will develop confidence, become articulate in front of others and learn how to organise and develop complex projects as part of a team, as well as gaining the high standard of skills required if you wish to pursue a career in a Performing Arts-related field.

BTEC APPLIED SCIENCE

BTEC LEVEL 3 CERTIFICATE IN APPLIED SCIENCE - YKA96

BTEC LEVEL 3 SUBSIDIARY DIPLOMA IN APPLIED SCIENCE - YKA97

THE PROGRAMME

Level 3 Certificate (equivalent to AS)

- **Unit 1: Fundamentals of Science** – a theory unit (including practical work) covering fundamental principles in biology, chemistry and physics.
- **Unit 2: Working in the Science Industry** - Exploring how scientists work and the many varied roles they carry out. Case studies on local science-based industry in the north-east.
- **Unit 3: Scientific Practical Techniques** – a portfolio unit designed to introduce learners to new experimental techniques, to reinforce methods met previously and to enable learners to apply these methods to new situations.

Subsidiary Diploma (equivalent to one A Level)

Contains all of the units from the Certificate as well as three optional units in Y13 which will be chosen as far as possible to support students' particular career or higher education interests. These include (but are not limited to) Physiology of Human Body Systems, Perceptions of Science, Biochemistry and Biochemical Techniques, Microbiological Techniques, Electrical Circuits and their Applications, Medical Physics Techniques, Polymer Process Engineering, Industrial Chemical Reactions, Principles of Plant and Soil Science, Physiology of Human Regulation and Reproduction, etc.

The course is one year for the Level 3 Certificate in Applied Science (equivalent to AS) / two years for the Subsidiary Diploma in Applied Science (equivalent to A Level). During VI Form lessons you will experience various teaching methods and styles such as demonstrations, practical work, lectures, handouts and notes, ICT work and one-to-one support. Half of your work will be assessed by the production of portfolios; therefore you will be expected to work much more on your own than you did at GCSE and to take a greater responsibility for your own organisation and learning. There are five main areas that A Level students need to be prepared for: organising time, coping with workload, note-taking, reading around the subject and self-motivation.

CAREER POSSIBILITIES

The specification aims to maintain and support the recognised standards demanded for science education and training in order to meet the requirements of various science sectors: chemical industry, health care, leisure and associated industries, medical and laboratory-based science, food and catering industries. Many previous students have used Applied Science as a route into higher education courses in areas such as nursing or midwifery, sports science, sound engineering, psychology, etc.

WHY STUDY THIS SUBJECT?

The qualifications in Applied Science are intended to encourage candidates to; develop and sustain an interest in and enjoyment of science; appreciate how science develops and the impacts such developments may have in present day society; develop essential knowledge and understanding relating to science and, where appropriate, the applications of science and the skills needed for the use of this in new and changing situations; develop practical skills relevant to science; appreciate the importance of science as a human endeavour which interacts with social, philosophical, economic, environmental and industrial matters; encourage candidates to develop skills in communication, application of number and the use of ICT. You will gain an awareness of how industry applies science in a wide range of essential functions and be introduced to a range of career possibilities which use aspects of science as their base point.

THE PROGRAMME

This BTEC course is a 7 Unit qualification which is all coursework and is equivalent to one A level. Universities weight this qualification as equal as they do an A-level as it is the same UCAS points tariff.

In Year 12 you study 4 units of:

- Principles of Anatomy and Physiology in Sport
- The Physiology of Fitness
- Assessing Risk in Sport
- Fitness Testing for Sport and Exercise

To make this course up to BTEC Level 3 Subsidiary Diploma in Sport (equal to an A level) you then study 3 additional units to those studied in Year 12:

- Fitness and programming for Sport and Exercise
- Practical Individual Sport
- Leadership in Sport

WHY STUDY THIS SUBJECT?

BTEC Sport can help you take your first steps towards a career in the sport and fitness industry. You will learn essential skills such as training for personal fitness, encouraging sports participation and organising and leading events and activities.

An ex-student says: "What made me study BTEC Sport was that it involved more coursework than exams and I was good at coursework and practical work. You also interact more with your teachers and fellow students, so it was a more relaxed atmosphere. I'm really glad that I did BTEC rather than A-level as I didn't have all that pressure at the end of the course."

CAREER POSSIBILITIES

Learners who successfully complete the course usually go on to study at university, with many then going into careers in sports development, sports coaching, physiotherapy, the Armed Forces, PE Teaching and the Leisure Industry, to name a few.

SPORTS LEADERSHIP

SPORTS LEADERS UK LEVEL 3 QUALIFICATION IN SPORTS LEADERSHIP
601/8586/7

CAREER POSSIBILITIES

The course will help students build their soft skills, helping them to become work ready: 78% of teenagers say that the skills they'd gained from a Sports Leaders' UK course could be used in the workplace (*Source: Institute of Voluntary Research, February 2015*).

THE PROGRAMME

Sports Leaders Level 3 now is a nationally recognised qualification (worth 16 UCAS points), that enables successful learners to independently lead purposeful and enjoyable sport/physical activity. The key content is based on developing leadership skills applying them to sport/physical activities to a range of participants with differing needs. There is 60 hours of tutored time, 30 hours of voluntary leadership time and 36 hours of home study, giving a Total Qualification Time (TQT) of 126 hours. The Sports Leaders will all complete the following units:

- Developing leadership skills
- Plan, lead and evaluate a sports/physical activity event
- Lead safe sport/physical activity sessions
- Plan, lead and evaluate sport/physical activity sessions for children

Then complete two units from the following:

- Plan, lead and evaluate sport/physical activity sessions in the community
- Plan, lead and evaluate sport/physical activity sessions for disabled people
- Plan, lead and evaluate sport/physical activity sessions for older people

WHY STUDY THIS SUBJECT?

- A fun and practical course that focuses on leading rather than technical ability.
- Potential stepping stone into employment, further education or training.
- A good foundation to progress onto other Sports Leaders' UK awards or qualifications and/or a National Governing Body award.
- Develops generic leadership skills that will be vital in other areas of life.
- Allows those who are not sports superstars to take a full and active role in sport and physical activity.
- Increased self-confidence that comes through taking responsibility for own and others' learning and enjoyment.
- Develop spiritual, moral, social and cultural awareness
- Gain 16 UCAS points on completion of HSL3 (...the same number of tariff points as an E Grade at A Level!)

THE PROGRAMME*

The BTEC National in Uniformed Protective Service is designed to equip learners with the knowledge, understanding and skills required for success when moving towards a career in the uniformed services, for example, Police, Emergency Fire Services, Prison Service, Security or Armed Services. Its main purpose is to allow learners to develop the core specialist knowledge, understanding and skills, including government policies and leadership and teamwork required by the sector.

- Citizenship and Diversity – examined unit
- Leading Effective Teams in the Uniformed Protective Service
- Plus two optional units to be decided

The course is studied over two years – Year one enables students to achieve the BTEC Level 3 Certificate and in the second year the BTEC Level 3 Extended Certificate. It is portfolio based with a variety of assessment methods: practical, written and verbal.

There is an examined unit – Citizenship and Diversity which consists of 2 ½ hour examination.

WHY STUDY THIS SUBJECT?

This qualification will:

- Enable you to make an informed judgement of your suitability to a career in a public service organisation
- Prepare you for entry into a public service organisation
- Enable you to recognise and work towards acquiring the skills and abilities which enhance promotion and career prospects within the public services
- Enable you to acquire the skills for entry into higher education in a public service related field

*Please note that at the time of this prospectus being released the full specification for the BTEC National in Uniformed Protective Service is yet to be finalised, therefore some of the above may be subject to change.

CAREER POSSIBILITIES

Public Services, provided by government such as law enforcement, health, defence and central and local government remain in demand and, whilst growth has slowed, will continue to have a vital role in the economic and social welfare of the nation. By studying a BTEC National Course, learners develop knowledge, understanding and skills required by the sector, including essential employability skills and apply them in real work contexts.

IT (INFORMATION TECHNOLOGY)

YEAR 12 - OCR LEVEL 3 CAMBRIDGE TECHNICAL CERTIFICATE IN IT - 05838

YEAR 13 - OCR LEVEL 3 CAMBRIDGE TECHNICAL INTRODUCTORY DIPLOMA IN IT - 05840

THE PROGRAMME

Unit 1: Fundamentals of IT - A sound understanding of IT technologies and practices is essential for IT professionals. Information learnt in this unit will provide a solid foundation in the fundamentals of hardware, networks, software, the ethical use of computers and how business uses IT.

Unit 2: Global Information- The purpose of this unit is to demonstrate the uses of information in the public domain, globally, in the cloud and across the internet, by individuals and organisations. This unit will help you to understand the legislation and regulation governing information that flows into and out of an organisation and the constraints and limitations that apply to it.

Unit 21: Web Design and Prototyping - You will research, design and produce an interactive, responsive website that is specific to a client's needs, culminating in presenting the concept of the website using the prototype to the client.

Unit 6: Application Design - You will explore potential ideas for a new application and develop the fundamental design for it. You will then develop the designs for an application and how users will interact with it. The application that you design can be for any sector and for any purpose. You will have the opportunity to present your ideas, prototype them, and gain feedback before refining your design.

Unit 9: Product Development - Whether you are building a network, developing a website, developing a system for data analytics or creating an augmented or virtual reality resource, they are all products. It is therefore important that you understand the processes required for the development of products and that you can apply them to a variety of situations.

The teaching styles for this subject will be lectures, presentations, practical lessons, extended research and projects, individual/paired/group reports, guided research and self-study. There are two exams in the first year at 100% of your grade and in the two-year certificate there are two exams (50%) and three coursework units (50%).

WHY STUDY THIS SUBJECT?

ICT systems are used in almost all areas of working and social life. The skills, knowledge and understanding that are gained through studying this engaging and complex subject are invaluable in almost all aspects of modern life. Given that in the future, be you employed by an organisation or be you self-employed, you will most likely require the ability to either work directly with ICT systems or have the understanding and knowledge to deal with those people that do. Each of the units that have been chosen connect the dots between far-reaching aspects of a complex, 21st century working life.

CAREER POSSIBILITIES

Web developer, software engineer, network management, systems analyst, roboticist, any engineering discipline, physics, medicine and medical related courses (such as optometry, pharmacy and orthoptics) and mathematics. Other subjects that link well with this course are Mathematics, Business, Media, Computer Science and Geography.
